

RITENDRA SAHOO

Data Analyst | Data Science | Python | Machine Learning

+91 7849082434 | sahooritendra302@gmail.com | Bengaluru, India | linkedin.com/in/ritendra-sahoo

PROFESSIONAL SUMMARY

Data Analyst and Data Science professional with practical experience in Python, SQL, and cloud technologies. Skilled at collecting, cleaning, and transforming raw datasets into clear, decision-ready insights. Comfortable working with large datasets — from exploratory analysis to building predictive machine learning models. Known for turning complex data into straightforward dashboards and reports that teams actually use. Eager to take on analytical challenges where curiosity and strong technical fundamentals can make a real difference.

TECHNICAL SKILLS

Python Libraries	Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, SciPy, Plotly, Statsmodels
Machine Learning	Regression, Classification, Clustering, Feature Engineering, Model Evaluation (ROC-AUC, F1, Confusion Matrix)
Data Analysis	EDA, Data Cleaning, Statistical Analysis, Time Series Analysis, KPI Tracking, MIS Reporting
Visualization	Matplotlib, Seaborn, Plotly, Excel Charts & Dashboards
Database	MySQL, SQL Queries, Database Design, Aggregations,
Tools & OS	Git, GitHub, Linux, Shell Scripting, VS Code, Google Colab, MS Excel (Advanced)
Cloud	AWS (Fundamentals), Google Cloud Platform (GCP)

PROFESSIONAL EXPERIENCE

Technical Support Executive • Netcarrots.com, Bengaluru Nov 2025 – Present

- Built and maintained daily MIS reports, consistently achieving 99% accuracy in data entry and ticket logging.
- Designed Excel dashboards to monitor team KPIs, giving leads instant visibility into daily performance metrics.
- Studied ticket resolution patterns and proposed process changes that cut average handling time by 15%.
- Wrote Python and shell scripts to automate repetitive reporting tasks, reclaiming over 5 hours of manual work each week.
- Collaborated with operations and QA teams to spot inefficiencies and translate findings into concrete workflow improvements.

Data Analyst Intern • CloudHeroWithAI, Pune May 2025 – Nov 2025

- Produced regular reports covering infrastructure health, application uptime, and deployment activity to inform engineering decisions.
- Created Excel-based dashboards using Pivot Tables, charts, and VLOOKUP functions to summarise operational metrics at a glance.
- Conducted exploratory data analysis on platform datasets, surfacing trends that guided product and infrastructure planning.
- Partnered with engineers and product teams to translate raw data into straightforward recommendations for operational efficiency.

PROJECTS

Netflix Content Analysis | Python, Pandas, Matplotlib, Seaborn | Dataset: Kaggle

- Analysed a dataset of 8,000+ Netflix titles to explore how content has evolved across genres, countries, and release years.
- Uncovered the top content-producing countries and peak addition years using group-by aggregations and time-based breakdowns.
- Built heatmaps, bar charts, and word clouds with Matplotlib and Seaborn to present insights clearly and visually.
- Key finding: US and India dominate content volume; drama and international content have grown fastest since 2016.

COVID-19 Global Data Analysis | *Python, Pandas, Plotly, SQL* | *Dataset: Our World in Data*

- Explored a 200+ country dataset tracking daily case counts, fatality rates, and vaccine rollout pace across time.
- Built interactive Plotly charts to compare infection wave timelines across regions, making country-level differences easy to see.
- Loaded structured data into SQL and wrote queries to extract per-country statistics and measure vaccination programme efficiency.
- Key finding: early-vaccinating countries showed measurably lower death rates during the Delta and Omicron waves.

Walmart Sales Time Series Analysis | *Python, Pandas, Statsmodels, Matplotlib* | *Dataset: Kaggle*

- Analysed historical weekly sales across 45 Walmart stores to identify seasonal patterns and holiday revenue impact.
- Applied time series decomposition to separate trend, seasonality, and residual components for cleaner forecasting inputs.
- Built an ARIMA forecasting model to predict future weekly sales, achieving a Mean Absolute Percentage Error (MAPE) under 8%.
- Key finding: holiday weeks — Super Bowl, Thanksgiving, Christmas — consistently drive 15–20% above-average sales.

Customer Churn Prediction | *Python, Scikit-learn, Pandas* | *Dataset: Kaggle Telco*

- Built a binary classification model to predict which customers are likely to cancel, helping retention teams prioritise outreach.
- Handled missing values, encoded categorical features, and balanced class imbalance using resampling techniques before modelling.
- Compared Logistic Regression and Random Forest; tuned Random Forest achieved ~84% accuracy with a ROC-AUC of 0.88.
- Key finding: contract type and tenure were the two strongest predictors of churn across all feature importance rankings.

EDUCATION

Degree	Institution	Year	CGPA
MCA (Master of Computer Applications)	Rajdhani Engineering College, B.P.U.T.	2023 – 2025	8.10
BCA (Bachelor of Computer Applications)	R.I.H.S., Fakir Mohan University	2020 – 2023	7.93
Pre-University (PUC / 12th)	R.I.H.S., Fakir Mohan University	2018 – 2020	6.70

CERTIFICATIONS

- Google Cloud Technical Series — Google (2022–2023)
- Python Concurrent Programming: Multiprocessing in Python (2025)
- AWS Cloud Practitioner Essentials — Amazon Web Services (2025)
- Introduction to Industry 4.0 and Industrial Internet of Things
- Cyber Security and Privacy
- Management Information System
